## **Listing of the Claims**

1. (Previously Presented) A mattress for a bed having a frame for supporting the mattress and siderails, including:

a non-puncture resistant cover having an interior surface; and a core disposed adjacent the interior surface including a body defining a plurality of mounting locations, each mounting location including an enclosure, the core further including a plurality of self-sealing gas containers respectively disposed within the plurality of enclosures.

- 2. (Canceled)
- 3. (Previously Presented) The mattress of claim 1, wherein each enclosure provides a substantially cylindrical space for receiving a respective container.
- 4. (Original) The mattress of claim 1, wherein the body is formed of substantially non-stretchable material.
- 5. (Original) The mattress of claim 4, wherein the substantially non-stretchable material is one of substantially non-stretchable fabric and substantially non-stretchable film.
- 6. (Original) The mattress of claim 1, wherein the body is formed of woven nylon twill.
- 7. (Original) The mattress of claim 1, wherein the cover defines an interior space bounded by the interior surface, the core being disposed substantially within the interior space.
- 8. (Original) The mattress of claim 1, wherein the containers are substantially cylindrical.
- 9. (Original) The mattress of claim 1, wherein the body includes an upper layer and a lower layer, the upper and lower layers being connected at a plurality of seams, thereby forming substantially cylindrical spaces for receiving the plurality of containers.

- 10. (Original) The mattress of claim 9 wherein the plurality of seams are substantially parallel to one another.
- 11. (Previously Presented) The mattress of claim 1 wherein the containers are connected to a gas source.
- 12. (Original) The mattress of claim 1 wherein the cover includes a sleep surface opposite the interior surface.
- 13. (Original) The mattress of claim 1 wherein the siderails have a minimum height above a sleep surface of the cover, and the core has a height, substantially all of the core height being occupied by the plurality of containers.
- 14. (Original) The mattress of claim 1 wherein one of the containers is pressurized to a first pressure and another of the containers is pressurized to a second pressure that is different from the first pressure.
- 15. (Previously Presented) A mattress for a bed having a frame for supporting the mattress and siderails, including:
- a non-puncture resistant cover having an interior surface; and a core disposed adjacent the interior surface including a plurality of enclosures, each enclosure including a self-sealing lining and each enclosure being affixed to an adjacent enclosure.
- 16. (Original) The mattress of claim 15 wherein each enclosure defines a substantially cylindrical space.
- 17. (Previously Presented) A mattress for a bed having a frame for supporting the mattress and siderails, including:
  - a non-puncture resistant cover having an interior surface; and
- a core disposed adjacent the interior surface including a plurality of enclosures, each enclosure including a self-sealing lining and each enclosure being affixed to

an adjacent enclosure, wherein the plurality of enclosures are formed of substantially nonstretchable material.

- 18. (Original) The mattress of claim 17 wherein the substantially non-stretchable material is one of substantially non-stretchable fabric and substantially non-stretchable film.
- 19. (Previously Presented) A mattress for a bed having a frame for supporting the mattress and siderails, including:

a non-puncture resistant cover having an interior surface; and

- a core disposed adjacent the interior surface including a plurality of enclosures, each enclosure including a self-sealing lining and each enclosure being affixed to an adjacent enclosure, wherein the plurality of enclosures are formed of woven nylon twill.
- 20. (Original) The mattress of claim 15 wherein the cover defines an interior space bounded by the interior surface, the core being disposed substantially within the interior space.
- 21. (Previously Presented) The mattress of claim 15 wherein the core includes an upper layer and a lower layer, the upper and lower layers being connected at a plurality of seams, thereby forming the plurality of enclosures.
- 22. (Original) The mattress of claim 21 wherein the plurality of seams are substantially parallel to one another.
- 23. (Original) The mattress of claim 15 wherein the plurality of enclosures are connected to a gas source, the gas source pressurizing the enclosures with a gas.
- 24. (Original) The mattress of claim 23 wherein one of the plurality of enclosures is pressurized to a first pressure and another of the plurality of enclosures is pressurized to a second pressure that is different from the first pressure.
- 25. (Original) The mattress of claim 15 wherein the cover includes a sleep surface opposite the interior surface.

- 26. (Original) The mattress of claim 25 wherein the siderails have a minimum height above the cover sleep surface, thereby defining a maximum height of the core, substantially all of the maximum core height being occupied by the plurality of enclosures.
- 27. (Previously Presented) A mattress, including:

means for defining a core including a plurality of sealed enclosures containing a gas, each enclosure being affixed to an adjacent enclosure; and

means for automatically re-sealing a puncture in any of the plurality of enclosures to prevent the gas from being released.

- 28. (Previously Presented) A patient support including:
  - a frame,
  - a siderail connected to the frame, and
- a mattress supported by the frame including a non-puncture resistant cover having an interior surface; and a core disposed adjacent the interior surface including a plurality of enclosures housing a respective plurality of containers, each container including a self-sealing lining.
- 29. (Previously Presented) The patient support of claim 28 wherein each enclosure defines a substantially cylindrical space.
- 30. (Previously Presented) The patient support of claim 28 wherein the plurality of enclosures are formed of substantially non-stretchable material.
- 31. (Previously Presented) The patient support of claim 30 wherein the substantially non-stretchable material is one of substantially non-stretchable fabric and substantially non-stretchable film.
- 32. (Previously Presented) The patient support of claim 28 wherein the plurality of enclosures are formed of woven nylon twill.

- 33. (Previously Presented) The patient support of claim 28 wherein the cover defines an interior space bounded by the interior surface, the core being disposed substantially within the interior space.
- 34. (Previously Presented) The patient support of claim 28 wherein the core includes an upper layer and a lower layer, the upper and lower layers being connected at a plurality of seams, thereby forming the plurality of enclosures.
- 35. (Previously Presented) The patient support of claim 34 wherein the plurality of seams are substantially parallel to one another.
- 36. (Previously Presented) The patient support of claim 28 wherein the plurality of enclosures are connected to a gas source, the gas source pressurizing the enclosures with a gas.
- 37. (Previously Presented) The patient support of claim 36 wherein one of the plurality of enclosures is pressurized to a first pressure and another of the plurality of enclosures is pressurized to a second pressure that is different from the first pressure.
- 38. (Previously Presented) The patient support of claim 28 wherein the cover includes a sleep surface opposite the interior surface and the core is positioned on an upper surface of the frame.
- 39. (Previously Presented) The patient support of claim 38 wherein the siderail has a minimum height above the cover sleep surface, thereby defining a maximum height of the core relative to the upper surface of the frame, substantially all of the maximum core height being occupied by the plurality of enclosures.
- 40. (Previously Presented) The mattress of claim 17 wherein each enclosure defines a substantially cylindrical space.

- 41. (Previously Presented) The mattress of claim 17 wherein the cover defines an interior space bounded by the interior surface, the core being disposed substantially within the interior space.
- 42. (Previously Presented) The mattress of claim 17 wherein the core includes an upper layer and a lower layer, the upper and lower layers being connected at a plurality of seams, thereby forming the plurality of enclosures.
- 43. (Previously Presented) The mattress of claim 42 wherein the plurality of seams are substantially parallel to one another.
- 44. (Previously Presented) The mattress of claim 17 wherein the plurality of enclosures are connected to a gas source, the gas source pressurizing the enclosures with a gas.
- 45. (Previously Presented) The mattress of claim 44 wherein one of the plurality of enclosures is pressurized to a first pressure and another of the plurality of enclosures is pressurized to a second pressure that is different from the first pressure.
- 46. (Previously Presented) The mattress of claim 17 wherein the cover includes a sleep surface opposite the interior surface.
- 47. (Previously Presented) The mattress of claim 46 wherein the siderails have a minimum height above the cover sleep surface, thereby defining a maximum height of the core, substantially all of the maximum core height being occupied by the plurality of enclosures.
- 48. (Previously Presented) The mattress of claim 19 wherein each enclosure defines a substantially cylindrical space.
- 49. (Previously Presented) The mattress of claim 19 wherein the cover defines an interior space bounded by the interior surface, the core being disposed substantially within the interior space.

- 50. (Previously Presented) The mattress of claim 19 wherein the core includes an upper layer and a lower layer, the upper and lower layers being connected at a plurality of seams, thereby forming the plurality of enclosures.
- 51. (Previously Presented) The mattress of claim 50 wherein the plurality of seams are substantially parallel to one another.
- 52. (Previously Presented) The mattress of claim 19 wherein the plurality of enclosures are connected to a gas source, the gas source pressurizing the enclosures with a gas.
- 53. (Previously Presented) The mattress of claim 52 wherein one of the plurality of enclosures is pressurized to a first pressure and another of the plurality of enclosures is pressurized to a second pressure that is different from the first pressure.
- 54. (Previously Presented) The mattress of claim 19 wherein the cover includes a sleep surface opposite the interior surface.
- 55. (Previously Presented) The mattress of claim 54 wherein the siderails have a minimum height above the cover sleep surface, thereby defining a maximum height of the core, substantially all of the maximum core height being occupied by the plurality of enclosures.
- 56. (Previously Presented) A mattress for a bed having a frame for supporting the mattress and siderails, including:
- a non-puncture resistant, substantially non-cushioning member having an interior surface; and
- a core disposed adjacent the interior surface of the substantially noncushioning member, the core including a plurality of self-sealing gas containers and a body, the body including a plurality of enclosures, the plurality of self-sealing gas containers respectively disposed within the plurality of enclosures.
- 57. (Previously Presented) The mattress of claim 56 wherein the substantially non-cushioning member includes an impermeable material.

- 58. (Previously Presented) The mattress of claim 56 wherein each enclosure provides a substantially cylindrical space for receiving a respective container.
- 59. (Previously Presented) The mattress of claim 56 wherein the body is formed of substantially non-stretchable material.
- 60. (Previously Presented) The mattress of claim 59 wherein the substantially non-stretchable material is one of substantially non-stretchable fabric and substantially non-stretchable film.
- 61. (Previously Presented) The mattress of claim 56 wherein the body is formed of woven nylon twill.
- 62. (Previously Presented) The mattress of claim 56 wherein the substantially non-cushioning member defines an interior space bounded by the interior surface, the core being disposed substantially within the interior space.
- 63. (Previously Presented) The mattress of claim 56 wherein the containers are substantially cylindrical.
- 64. (Previously Presented) The mattress of claim 56 wherein the containers are connected to a gas source.
- 65. (Previously Presented) The mattress of claim 56 wherein the substantially non-cushioning member includes a sleep surface opposite the interior surface.
- 66. (Previously Presented) The mattress of claim 56 wherein one of the containers is pressurized to a first pressure and another of the containers is pressurized to a second pressure that is different from the first pressure.
- 67. (Previously Presented) A mattress for a bed having a frame for supporting the mattress and siderails, including:

a non-puncture resistant, substantially non-cushioning member having an interior surface; and

a core disposed adjacent the interior surface including a plurality of enclosures, each enclosure including a self-sealing lining and each enclosure being affixed to an adjacent enclosure.

- 68. (Previously Presented) The mattress of claim 67 wherein the substantially non-cushioning member includes an impermeable material.
- 69. (Previously Presented) The mattress of claim 67 wherein the substantially non-cushioning member defines an interior space bounded by the interior surface, the core being disposed substantially within the interior space.
- 70. (Previously Presented) The mattress of claim 67 wherein the core is connected to a gas source.
- 71. (Previously Presented) The mattress of claim 67 wherein the substantially non-cushioning member includes a sleep surface opposite the interior surface.
- 72. (Previously Presented) The mattress of claim 67 wherein one of the enclosures is pressurized to a first pressure and another of the enclosures is pressurized to a second pressure that is different from the first pressure.
- 73. (Previously Presented) A patient support including:
  - a frame;
  - a siderail connected to the frame; and
  - a mattress supported by the frame, the mattress including:
- a first member defining an interior region and having a top surface and a first height, the top surface including a non-puncture resistant portion; and

a core disposed within the first member adjacent the top surface, the core including a plurality of self-sealing inflatable members, each of the inflatable members configured to be inflated with a fluid, wherein a height of the core is substantially equal to the first interior height when the plurality of inflatable members are inflated with the fluid.

- 74. (Previously Presented) The patient support of claim 73 wherein the first member of the mattress includes a top cover and a bottom cover, the top cover and the bottom cover being connected together to define the interior region.
- 75. (Previously Presented) The patient support of claim 73 wherein the non-puncture resistant portion is substantially non-cushioning.
- 76. (Previously Presented) The patient support of claim 73 wherein the core of the mattress includes a body including a plurality of enclosures.
- 77. (Previously Presented) The patient support of claim 76 wherein the plurality of inflatable members are gas containers respectively disposed within the plurality of enclosures.
- 78. (Previously Presented) The patient support of claim 76 wherein each of the plurality of enclosures includes a self-sealing lining to form the plurality of inflatable members.
